

CairMax Duo – a versatile foam air combination support surface with the ability to ‘step up’ to dynamic support by adding a pump, in response to the needs of the patient.

Powered hybrids also consist of foam and air cells, configured as a layer of castellated foam at the patient interface, with a series of powered air cells around the foam inserts, effectively providing a layer of alternating air cells above the foam. The attachment of a powered control unit can inflate and deflate alternate air cells at regular intervals.

AIR CELLS CAN ‘STEP UP’ TO PROVIDE ALTERNATING PRESSURE RELIEF BY ADDING A CONTROL UNIT.

### Versatility

Static mattress can be easily converted to provide dynamic therapy by adding the control unit.

### Safety

Automatic weight sensing technology adjusts pressure to the appropriate setting for effective therapy and patient comfort.

Manual adjustments can be made for individualised therapy or comfort.

### Simplicity

‘Plug and play’ system is simple to use requiring minimum training to operate, making it ideal for community or aged care use.

Switching between static and dynamic modes requires minimal effort and cause no disruption to patient comfort. This hybrid feature also significantly reduces operational costs, ensuring the same surface remains suitable across a range of patient conditions.

### Comfort

Offers improved comfort for patients unable to tolerate alternating systems.

Castellated foam articulates when the mattress is profiled, while static head cells offer stable support for enhanced sleep.

### CairMax Duo

- Step-up, step-down foam air support surface
- Offers static pressure relief and dynamic therapy in one
- Maximum versatility and maximum comfort combined
- 'Plug and play' design for ease of use
